A close-up photograph of a stone fountain. The fountain is constructed from large, rectangular stone blocks. A hole in the wall on the left side of the image is the source of a powerful, clear stream of water that arcs to the right. The water is captured in mid-air, creating a dynamic sense of movement. The background is slightly blurred, showing more of the fountain's structure and some greenery. The overall scene is brightly lit, suggesting an outdoor setting.

Travertine: /ˈtrævər.tɪn

A mineral consisting of a massive usually layered calcium carbonate (such as aragonite or calcite) formed by deposition from spring waters or especially from hot springs. It often has a fibrous or concentric appearance and exists in white, tan, cream-colored, and even rusty varieties.

Limestone: /ˈlaɪmstəʊn

A sedimentary rock consisting predominantly of calcium carbonate, varieties of which are formed from the skeletons of marine microorganisms, coral and shells: used as a building stone and in the manufacture of lime.

A photograph of a modern building's exterior. The foreground is a light-colored, textured concrete floor. In the background, there is a building with a dark, possibly black, facade and a large, light-colored rectangular feature. A semi-transparent grey horizontal band is overlaid across the middle of the image, serving as a background for the text.

“THE
BEAUTY OF
NATURE, WITH
A MODERN
TWIST”

A photograph of a stone dam with water cascading over it, set against a background of a clear blue sky and a body of water. The dam is constructed from large, rough-hewn stones. The water is a vibrant blue, and the sky is a clear, bright blue. The overall scene is serene and natural.

ALASKA SPLITFACE

A close-up photograph of a pool coping joint. The coping consists of a brick base with a concrete cap on top. The brick is reddish-brown and shows some wear and mortar lines. The concrete cap is light grey and has a rough, textured surface. The background is blurred, showing more of the pool deck and some greenery.
